Professional Experience

Full Stack Developer

04/2026 – 10/2026

DR Stone 

Casablanca, Morocco

- Engineered cross-platform mobile interfaces in Expo / React Native and responsive web layouts using Next.js.
- Built reusable, accessible UI component libraries ensuring visual and state consistency across iOS, Android, and web.
- Integrated RESTful endpoints and optimized client-side state management for smooth rendering and data flow.

Full Stack Developer

11/2023 – 08/2025

Open Development and Education Ltd. 

Remote

Developed and maintained full-stack web applications using modern technologies. Worked extensively with Next.js for frontend development and NestJS for backend services, delivering complete solutions that enhanced user experience and system performance.

Full Stack Developer

04/2023 – 06/2023

A-DigitArt

Contributed to full-stack development projects, gaining valuable experience in web application development and modern development practices.

Education

Software Engineer

11/2021 – Present

1337 Coding School

Khouribga, Morocco

Intensive computer science education focused on programming fundamentals, algorithms, and modern web development technologies. Part of the prestigious 42 Network, known for its peer-to-peer learning methodology and rigorous curriculum.

Skills & Technologies

Programming Languages

C, C++, JavaScript, TypeScript.

Frontend Development

React.js, Next.js, Astro.js, React Native, Expo, Redux, Zustand, HTML, CSS, Tailwind CSS.

Backend & Database

Node.js, Express.js, NestJS, PostgreSQL, REST APIs, Redis.

Tools & Technologies

Git, Docker, Zod, VS Code, Figma, Vercel, SSH

Certificates

- [CodinGame Certification - TypeScript](#) ↗
- [TestDome - TypeScript](#) ↗

Highlighted projects

TalentHub – Modern Hiring Platform

TalentHub is a recruitment workflow platform designed to help hiring teams and candidates streamline the application process. It centralizes job postings, application tracking, and recruiter dashboards into one intuitive interface. <https://talent-hub-pied.vercel.app/> ↗

Swiftly Companion – Mobile App with 42 API

Built a mobile app in React Native (Expo.js) that integrates with the 42 API to display detailed student profiles (projects, skills, achievements). Implemented OAuth2 authentication, REST API consumption, and UI components. Enhanced expertise in cross-platform development and API integration.

My Education Evidence

A cutting-edge system simplifies the way you organize, access, and secure your publication in zotero. (my.educationevidence.io ↗)

Online multiplayer ping-pong game.

Transcendence is the flagship capstone project of the 42 Network's Common Core curriculum. Built as a Single-Page Application (SPA), it empowers users to play multiplayer Pong in real time, complete with social features such as chat, matchmaking, spectating, profiles, and detailed leaderboards

Kzandpartners

Dynamic Website with Integrated Blog

Developed a dynamic website for a local business using Next.js and Strapi. Integrated a blog to allow the business owner to post updates and announcements. Collaborated with the business owner to gather requirements and design a website that met their specific needs.

Webserv (HTTP Server)

The Webserv project allowed me to deepen my understanding of the C++ programming language. I learned how to parse HTTP requests, handle different HTTP methods (GET, POST, etc.), and generate appropriate HTTP responses.

Inception

Proficient in creating and managing Docker images, including optimizing size. Experienced with Docker Compose for container orchestration and networking, including network creation, container linking, and port exposure.

cub3d – 3D Raycasting Game Engine

Built a first-person 3D game engine in C using raycasting techniques. Implemented real-time rendering, collision detection, player movement, textures, and minimap navigation. Strengthened low-level programming, memory management, and graphics handling skills with the MiniLibX library.
